# Equipped enclosures and cabinets to suit all your applications

The **specialist** in load breaking, switching, protection, metering and measurement, SOCOMEC designs and produces **standard and tailored integrated solutions**.

With our dual expertise (in products and solutions) we can offer you the electrical equipment you need for your systems, all under a **manufacturer's guarantee**.

The result of the long accumulation of extensive experience, our **standard integrated solutions** bring you:

- **Fast implementation backed up** by a review of system limitations
  - **Ease-of-use, without any risk of non-compliance errors**
- Our solutions guarantee:
- **The safety and protection of people and goods**
  - **Continuity of use**
  - **Compliance with standards on products, assemblies and installations**

## What you need to know!

SOCOMEC has an entire department at your service, dedicated to the design and production of specialist equipment.

This department is here to support you throughout your projects, including:

- Building specifications
- Budgets
- Planning
- Design and production
- Qualification and certification
- Support during installation and startup
- Training

Draw on our expertise and contact your local SOCOMEC branch.

IEC 61439

## PV enclosures

PV enclosures are designed to consolidate the many channels of photovoltaic modules, while protecting against overcurrents and overvoltages, to enable their connection to solar inverters. In their design (Class II), they provide a maximum level of security for users from external intervention.

With the SOCOMEC range of PV enclosures you have the solution and a manufacturer's guarantee for all your solar needs (solar fields, buildings and residential systems).

## Solutions for medical premises

The availability of a reliable electrical power supply is vital to ensure continuity of care. There is no excuse today for power failures that can lead to life-or-death situations.

Medical IT cabinets ensure the availability of electrical power in medical centres (in accordance with standard NFC 15-211).

The SOCOMEC medical IT cabinet range comes in three models and provides the solution for all your medical centre needs, with manufacturer's guarantee.

# Equipped enclosures and cabinets to suit all your applications

## Enclosed switches

Enclosed switches incorporate load-break switches with or without fuses, developed, qualified and certified for industrial electrical distribution and service sector networks.

They support the load-breaking, isolation and lockout of the mains power for all types of loads and can also be used as a general switch for equipment in various applications.

## Safety enclosures

Safety enclosures are designed to be installed near a motor or a machine to **separate them from the power supply**. This includes manually operated, **padlockable load-break switches**, in the OFF position with a **visible and reliable display** of the switchgear's open position.

During preventive maintenance or inspection work, these enclosures ensure operator **safety against the accidental startup of electrical machines**.

For use in an explosive atmosphere (gas/dust), use our ATEX model to prevent any explosion during the unit's opening/closing phases, which generate electrical arcs.

## Switching enclosures

Switching enclosures ensure the availability of electrical power in critical facilities (high-rises, public buildings, hospitals, IT or telecommunications centres, airports, industrial sites, etc.), operated manually or automatically to switch between a normal power source and a backup source (genset or auxiliary transformer) to cover in the event of failure. (Fig. 1)

For sites that require a power availability rate close to 100%, our

**ATyS Bypass** solution offers dual redundancy during normal operation, service and maintenance work. With its capacity to resume Normal/Bypass channels, the ATyS Bypass solution allows the continued, seamless and safe use of your systems.

In industry, our switches can provide:

- A lockout by the earthing connection (Fig. 2)
- Load redundancy (e.g. between motors) (Fig. 3)

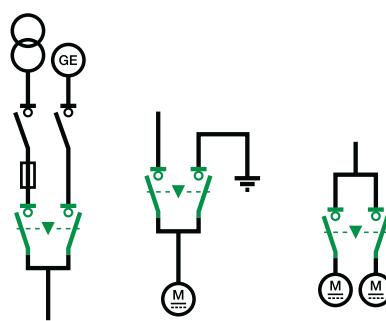

Fig. 1

Fig. 2

Fig. 3

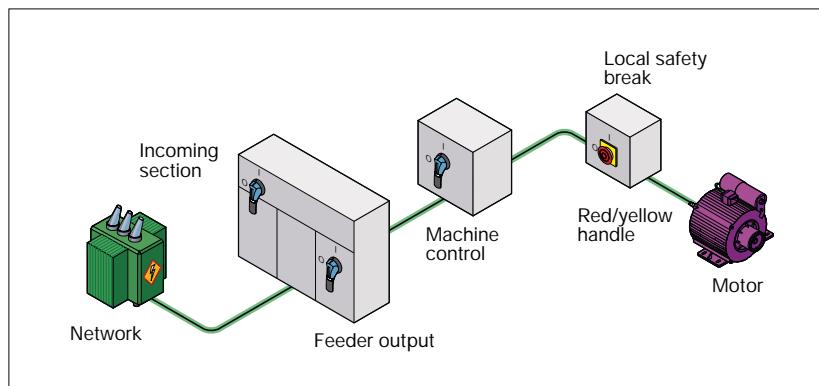

# Enclosed switches

## Enclosed load break switches and fuse combination load break switches

Switchgear systems are an essential part of your electrical system. Installed at every level of the distribution, they allow you to secure and isolate parts of the network or electrical equipment.

### SOCOMECH load break switches in power distribution and machine control applications

conf\_611\_a\_1\_gb\_catal

### The solution for

- > Processing industry
- > Infrastructure
- > OEM

### The advantages

- > Increased flexibility
- > Maintenance safety
- > Adaptable to every environment

### A manufacturer's expertise

- > Active in the electrical switchgear market since 1922, Socomec is both a global leader and an undisputed benchmark reference.
- > Our enclosed solutions, with or without fuse protection, are suitable for a wide variety of commercial and industrial power distribution operating environments and applications.  
From 20 to 1600 A, to IEC or UL standards, we now have one of the widest ranges on the market.

## Business sectors

### Processing industry

- Cement plant - Quarries
- Steel plant
- Food processing industries

### OEM

- HVAC - heating, ventilation and air-conditioning
- Lifting

### Infrastructure

- Airports - Tunnels - Motorways
- Water treatment

## Which product for which business?

Enclosure	Isolating		Metallic	
	Polycarbonate	Polyester	Painted sheet metal	Stainless steel
Rating	20 to 125 A	160 to 630 A	20 to 1600 A	32 to 100 A

Cement plant		++	+++	
Steel plant		++	+++	
Food processing	+	++		+++
Tunnels	+	++	+++	
Water treatment	++	+++		
HVAC	+++	++		
Lifting	+	++	+++	

## The benefits of our range

Enclosed switches equipped with Socomec load break switches or fuse combination load break switches provide emergency breaking, breaking for mechanical maintenance, local safety isolation and fuse protection for any low voltage circuit.

### FLEXIBILITY

#### Increased flexibility for more productivity

Controlling the power as close as possible to consumers makes operation and maintenance easy, autonomous and safe. This allows you to optimise the equipment's operating times.

#### Maintenance safety

Breaking close to the load means the system can reliably identify which circuits need to be disconnected. On-load breaking and isolating, as well as the clear indication of the load break switch's position and the triple lock of the control lever (in the open position) allows non-electricians to reliably and easily shutdown and isolate a supply circuit. The locking of access (live or non current-carrying) to the enclosure's internal equipment can be managed to suit all kinds of safety procedures.

#### A solution to suit any environment

Available in 4 materials, the Socomec enclosed switch range can withstand most environmental constraints; protection against water and dust (IP), mechanical impact (IK) or corrosion.

- > Customised solutions available on request.

### Function

**Enclosed load break switches** ensure the on-load breaking and making of circuits and safely isolate all low-voltage electrical circuits by providing protection against contact with live parts and environmental elements, such as dust, water and other hazards.

They enable the shutdown and isolation of the power supply as close to the equipment as possible.

### Advantages

#### Safe operation

- Secures transfer for mechanical or electrical work.
- On-load breaking.
- Ergonomic control lever, available in red/yellow or black.
- Triple lock in OFF position.

#### Easy setup

- Cable access top and/or bottom.
- Pre-drilled cable glands (up to 125 A).
- Removable steel cable glands, top and bottom (> 125 A), aluminium coated (> 630 A).
- Plenty of room for cabling.

#### Extensive range

- Standard range
- Customised on request.

## Load break switch in isolating enclosure

■ **COMO** in polycarbonate enclosure

## General characteristics

como-enc\_005\_a\_front\_2\_cat

- From 20 to 125 A.
- 3, 4, 6, 8 poles.
- Yellow/red or grey/blue lever.
- Triple lock in OFF position.
- Polycarbonate enclosure.
- Screw-on front.
- Colour: RAL 7035.
- Degree of protection: IP65.
- Pre-drilled cable-in holes at top and bottom.

## Accessories

- Unswitched neutral pole optional extra (max. 1).
- NO+NC or 2 O auxiliary contact.

# Enclosed transfer switches

The changeover switch market sets high standards in terms of security and quality.

Changeover switches are essential safety devices to ensure the continuity of the power supply in critical installations (high-rise buildings, healthcare buildings, data centres, banks, etc.).

With its expertise in switching technology, SOCOMEC can optimise your electrical systems and **ensure the continuity of your power supply.**

To ensure maximum operational safety, all of SOCOMEC's enclosed changeover

enclosures conform to standards IEC 60947-3/IEC 60947-6-1 and IEC 61439 switchboard standards.

From the small 25 A manual changeover switch enclosure to the 3200 A ATyS bypass cabinet, SOCOMEC offers a complete range to suit your every need.

## Glossary according to IEC 60947-6-1

Definitions:

- MTSE (Manual Transfer Switch Equipment) is manually operated mains changeover equipment.
- RTSE (Remote Transfer Switch Equipment) is remotely operated mains changeover equipment.
- ATSE (Automatic Transfer Switch Equipment) is automatically operated mains changeover equipment.

**The entire range of SOCOMEC changeover switches is rated PC-class.**

## A few types of application

### Changeover switching

A manual or automated switching solution between two transformer or genset sources (Fig. 1).

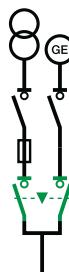

Fig. 1

### Earth connection

Earthing of equipment such as motors and electrical lines while securely isolating at their point of supply (Fig. 2).

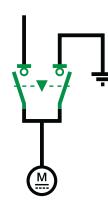

Fig. 2

### Load changeover

Switching the power supply from one load to another to ensure redundancy and balancing out the operating time of the two loads (Fig. 3).

Fig. 3

### Phase reversal on motors

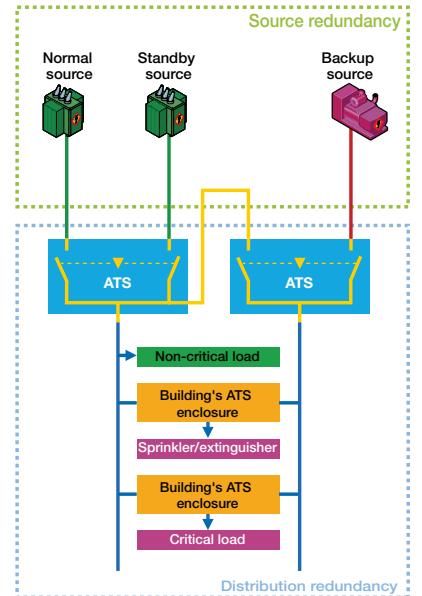

Changing the order of the phases powering a motor with the aim of changing its direction of rotation (fig. 4).

Fig. 4

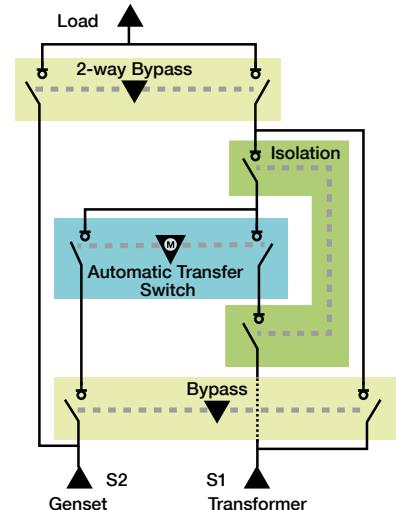

## HRB (High-rise Building) application

- Transfer switches are today subject to the official regulations on high-rise buildings and skyscrapers to guarantee a continuity in the power supply, e.g for:
  - Sprinklers
  - Goods lifts/lifts
  - Smoke extraction devices
  - Security lighting
- According to article R122-2 of the French Code of Design and Housing, residential high-rise buildings are those taller than 50 m and those used for all other purposes are taller than 28 m (e.g. hotels, offices).
- The category of high-rise buildings covers those in which the top floor is located at a height greater than 200 m.

## ATyS Bypass

- The ATyS Bypass is the ultimate solution for ensuring the complete availability of power for critical loads (nozzles, lifts, pumps, etc.) in vulnerable buildings (high-rise buildings, data centres, healthcare centres, etc.).
- The ATyS Bypass allows you to completely isolate the changeover switch to perform inspections and safely carry out periodic tests without interrupting the power supply.

# Manual transfer enclosed switches

Enclosed COMO CS, SIRCOVER, SIRCO M

25 to 1600 A

Integrated products  
and solutions

**COMO CS** enclosure  
25 to 100 A  
Polycarbonate - IP65

**SIRCOVER** enclosure  
160 to 630 A  
Polyester - IP65

**SIRCO M** enclosure  
32 to 100 A  
Painted steel - IP65

**SIRCOVER** enclosure  
160 to 1600 A  
Painted steel - IP65

## The solution for

- > Securing the electrical supply for moderately sensitive applications

## Strong points

- > Safe operation
- > Suitable for all kinds of environment
- > Easy setup
- > Extensive range

## Compliance with standards

- > IEC 60947-6,-1
- > IEC 60364
- > IEC 61439
- > EN 60204-1

## Function

**Enclosed changeover switches** ensure the on-load changeover of circuits and safely isolate all low-voltage electrical circuits by providing protection against contact with live parts and environmental elements such as dust, water and other hazards.

They safely switch sources or loads and enable the shutdown and isolation of the power supply as close to the equipment as possible.

## Advantages

### Safe operation

- Proximity disconnection.
- Ergonomic control lever.
- Triple lock system.

### Suitable for all kinds of environments

- Isolating for chemical environments and outdoor areas.
- Painted steel for impact protection.
- Stainless steel for food processing and pharmaceutical applications.

### Easy setup

- Room for cabling.
- Pre-drilled cable-in holes.

### Extensive range

- Standard range.
- Products suitable for any use.
- Red-yellow, black lever.

# Motorised and automatic transfer enclosed switches

## ATyS in enclosure

40 to 3200 A

Integrated products  
and solutions

### The solution for

- > High-rise buildings
- > Data centers
- > Energy generation
- > Healthcare buildings
- > Banks and insurance companies
- > Transport (airports, tunnels, etc.)

### Strong points

- > Quick installation
- > Wide choice
- > Easy maintenance
- > Adaptability

### Compliance with standards

- > IEC 60947-3
- > IEC 60947-6,-1
- > IEC 61439-2

### Function

Our **transfer enclosures** are equipped with ATyS motorised and automatic changeover switches to ensure power availability in critical applications. Motorised transfer enclosures are controlled manually or remotely through an external automated system. Automated transfer enclosures automatically ensure that power availability is integrally managed.

### Advantages

#### Quick installation

Easy installation with the network auto-configuration feature. All of the auxiliary contacts, inputs and outputs are routed on terminal strips for high rating ATyS models.

#### Wide choice

ATyS models have specific functions to make your electrical system safer and smarter.

Compatible with all types of BMS/SCADA of your choice. Always know what is happening on your network.

#### Easy maintenance

ATyS models have maintenance-free arcing contacts. You can also control the device with the emergency lever behind the door.

#### Adaptability

With a wide range of setup options, our range of enclosed ATyS models are adapted to suit your needs.

# Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

## ATyS M in polycarbonate enclosure

### General features

coff\_538\_a.eps

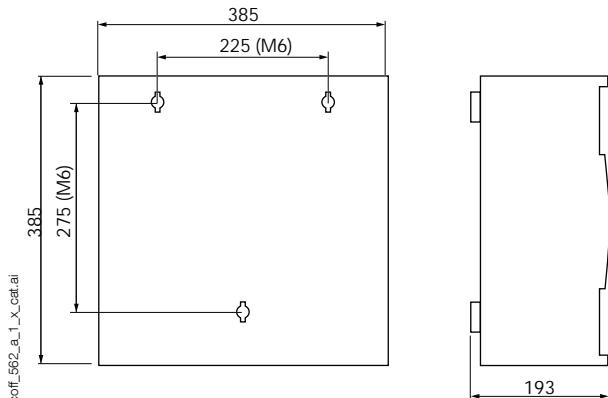

- From 40 to 160 A.
- Mains 230 VAC [176 VAC-288 VAC] 50 Hz or 60 Hz [45 Hz-65 Hz].
- Bridging bar built-in.
- Mounted auxiliary contact.
- IP rating: IP 41.
- Colour: RAL 7035.
- Fixed at the base of the enclosure.
- Cover closed with 4 screws.

## ATyS M in polycarbonate enclosure

atysm\_251\_b\_1\_cat.eps

### General features

- From 40 to 160 A.
- 230 VAC [176 VAC-288 VAC] 50 Hz network or 60 Hz [45 Hz-65 Hz]
- Degree of protection: IP 55, IK08.
- Colour: RAL 7035.
- Material: transparent cover, enclosure base: polycarbonate.
- Mounting: 4 holes on the rear of the enclosure.
- Flame resistant to 650°C.

## ATyS M in steel enclosure

### General features

coff.366.b

- Suitable for environments subject to mechanical risk and dust hazards.
- Bridging bar built-in.
- IP rating: IP3x or IP54.
- Colour: RAL 7035.
- Plates > cables: upstream and downstream.
- Material: 1.2 mm-thick steel.
- Coating: epoxy polyester powder.
- Mounting: 4 wall mounting brackets - not mounted.
- Door: hinged, cutout 327.4x47.6 mm.
- Door lock: 3 mm double bar key (included).

## Choose your equipment

Order the right part number

### Mounting option

- This option determines the type of mount and the position of the ATyS in the enclosure or cabinet.

### Connection option

- This option determines the type of cable connections on your device.

### Display option

- This option determines the type of display available at the front of the enclosure. Option compatible only when enclosure is base-mounted.

### Option to have the output on the terminal block

- This option determines the connection type for inputs/outputs and auxiliaries on wiring terminals.

### Other options

- With this option you can add extra features such as surge protection and/or a genset battery charger.

### Measurement option

- This option determines the load current measurement. Option only available on ATyS p.

## Delivered equipped and adapted to your needs

> Socomec can help you decide on the best configuration for your needs.

# Transfer enclosed switches

**ATyS Bypass**

40 to 3200 A

## Function

- Automatically switches between 2 sources to ensure continuity of the supply to critical loads such as sprinklers, lifts, water pumps, etc.
- Assures continuity of service during service work, maintenance and testing.
- Full isolation of the automatic switch for safe maintenance work.
- By connecting an **ATyS** to a remote **D20** interface, you can configure, operate and view the measurements at the front of

the equipment (timer settings, thresholds and hysteresis, start/stop of the genset, etc.)

## General features

- 40 to 3200 A, 4-pole.
- Mains 230/400 VAC ±20%, 50/60 Hz, auto supply from sources.
- Normal/backup control logic.
- Voltage and frequency control of networks I and II.
- Phase rotation control.
- 1 configurable bi-stable output relay for genset start/stop command.
- Control positions I, 0, II with dry contact.
- Manual emergency control.
- Auxiliary contacts.
- JBus/Modbus communication (as standard).
- Auto/Man switch.
- Equipment IP code: IP41 as standard and other IP codes on request.
- Hinged door.
- Retaining brackets (wall mounting) up to 160 A.
- Extension feet from 250 to 3200 A.
- Removable ATyS from 160 A
- Bar identification.
- Mimic panel (3 LEDs for live voltage on source 1, source 2, and load; optional 16-LED mimic panel).
- Built-in protection against direct contact from each functional unit.
- Steel enclosure.
- Colour: RAL 7035.

\* ATSE: Automatic Transfer Switching Equipment.

## The solution for

- Data centers
- Energy generation
- Healthcare buildings
- High-rise building
- Banks and insurance companies
- Transport

## Strong points

- No load breaks when switching to bypass mode
- Certified solution
- A wide range of accessories available

## Compliance with standards

- IEC 61439-2
- IEC 60947-6,-1
- IEC 60947-3
- BS 60947-6-1

## Expert Services

Technical site audit, solution specification, advice, commissioning, maintenance, training, etc.

Our Expert Services extend to a complete offer of customised services to make your project a success.

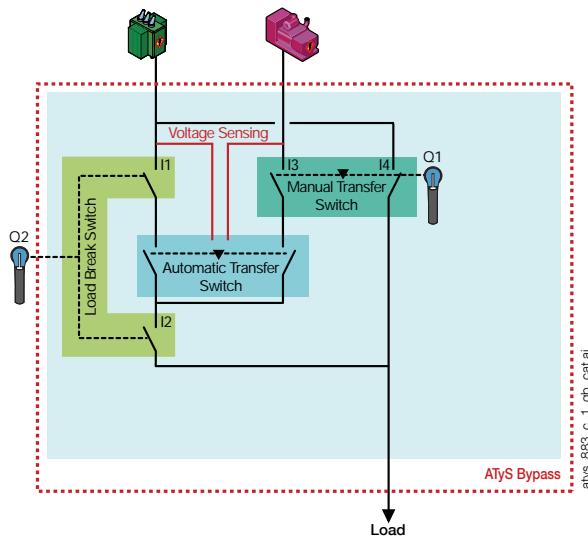

## 2 model versions

### ATyS Bypass Single Line

- This consists of 2 components: an automatic changeover switch and a single shunting branch (bypass) connected to the priority source.

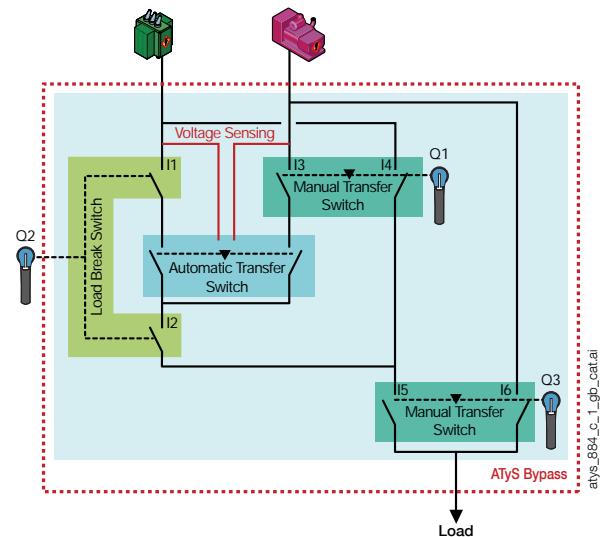

ATyS Bypass - SINGLE LINE

### ATyS Bypass Double Line

- This consists of 2 functions: an automatic changeover switch and 2 bypass branches so the available source can be selected during the bypass periods if there is a mains outage.

ATyS Bypass - DOUBLE LINE

## Functions

### Normal position:

- The load is supplied by the source defined on the ATyS as primary. In the event that there is an outage on this source, the ATyS automatically switches to the backup source as soon as it becomes available.

### Bypass position:

- The ATyS switches to bypass mode first by creating a bypass branch via Q1 to maintain the power supply of the load without any interruptions, and then by opening the load break switch Q2. This ensures the complete isolation from all power sources and allows operators to work safely on the system.

### Test position:

- From the bypass position, just turn off the Q2 switch to resupply the ATyS and run tests without disturbing the power supply, before returning to the normal position.

### Extension enclosure

#### Use

From 1250 to 3200 A, the standard enclosed ATyS Bypass solution can connect the sources from below and connect the load from below or above.

To make it easier to connect, you can opt for an extension enclosure featuring every type of connection (LL/HH/HL/LH).

kdry5\_504\_a\_2\_cat

### Surge protection

#### Use

Protect your equipment against surges with a type 1 and type 2 surge protector kit.
